			TECHNICAL FIELDS SEARCHED (Int.Cl.7)

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. Claims: 1-19,22 (all completely)

Methods of diagnosing, prognosticating, monitoring the progression or evaluating a treatment of a neurodegenerative disease comprising determining the level and/or activity of a transcription/translation product of a gene coding for a vault protein in a sample; a kit for diagnosing or prognosticating a neurodegenerative disease comprising at least one reagent that selectively detects a transcription/translation product of a gene coding for a vault protein; a recombinant non-human animal comprising a non-native gene sequence of a vault protein, an assay for screening for a modulator of a neurodegenerative disease using vault polynucleotides or proteins, use of an antibody specifically immunoreactive with an immunogen, wherein said immunogen is a translation product of a gene coding for a vault protein for detecting a neurodegenerative disease.

2. Claims: 20,21 (all completely)

An assay for testing a compound, preferably for screening a plurality of compounds for inhibition of binding between a ligand and a vault protein and an assay for testing a compound, preferably for screening a plurality of compounds to determine the degree of binding of said compounds to a vault protein.

Claim(s) not searched:  
10,11,13

Reason for the limitation of the search (non-patentable invention(s)):

Article 52 (4) EPC - Method for treatment of the human or animal body by therapy

---

Further limitation of the search

Claim(s) not searched:  
14

Reason for the limitation of the search:

Present claim 14 relates to a product defined by reference to a desirable characteristic or property, namely being a modulator of an activity or a level of at least one substance selected from the group listed in claim 14 under (i)-(iv). The claim covers all products having this characteristic or property, whereas the application does not provide any support within the meaning of Article 84 EPC and/or disclosure within the meaning of Article 83 EPC for such products. In the present case, the claim so lacks support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Independent of the above reasoning, the claim also lacks clarity (Article 84 EPC). An attempt is made to define the product by reference to a result to be achieved. Again, this lack of clarity in the present case is such as to render a meaningful search over the whole of the claimed scope impossible. Consequently, no search has been carried out for claim 14.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 00 7820

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
